Alta Affidabilità
 High Reliability

The new **MP1^{Plus}** Professional Digital Panel Indicator is capable of receiving signals from strain gauge transducer, transmitter sensors with voltage or current output and potentiometers.

It is particularly suitable for static and dynamic applications in industrial environments where it is necessary to measure WEIGHT, FORCE, PRESSURE, ISPLACEMENT and TORQUE.

The acquisition frequency can be set from 2.5 sampling per second to 1200 (1.2kHz), thus meeting the needs of applications where high response speed is required.

The instrument works with a resolution of $\pm 20,000$ divisions and exceeds 0.02% accuracy thanks to a 24-bit internal Sigma Delta converter.

To suit every application, the instrument features **ZERO**, **PEAK**, **HOLD** functions, which can be activated via keyboard or remote control and 2 programmable setpoints with relay outputs.

The input channel can be supplied in 4 different configurations:

- Version with input for **strain gauge transducer**, suitable for working with load cells, force transducers, pressure, displacement and torque with output $\pm 1\text{mV} / \text{V}$, $\pm 2\text{mV} / \text{V}$ or $\pm 3\text{mV} / \text{V}$ with 4 wire connection system. Possibility of connecting multiple transducers in parallel.
- Version with **voltage input**, suitable for working with pressure transmitters, torsionimeters ... with output $\pm 10\text{V}$ or $\pm 5\text{V}$.
- Version with **current input**, suitable for working with pressure transmitters, torsionimeters ... with output 4-20mA or 0-20mA and 2 or 3 wire connection.
- Version with **POTENZIOMETER** input, suitable for working with linear or displacement transducers.

The instrument is equipped with:

1 DIGITAL INPUT with programmable function.

2 SET POINT programmable in positive, negative, or absolute range.

2 RELAY OUTPUTS with exchange contact that can be used in conjunction with set points for simple automation or intervention logic.

As **OPTION**, the instrument can be equipped with:

- **ANALOG OUTPUT** programmable in voltage ($\pm 10\text{V}$, 0-10V, $\pm 5\text{V}$, 0-5V) and current (4-20mA) with refresh rate equal to the acquisition frequency of input channel conversion.

Other important features and functions are:

- **ZERO** function
- **ZERO BLOCK** function to prevent tampering by unauthorized persons.
- **HOLD, PEAK, FILTER, SAMPLING FREQUENCY, PROGRAMMABLE RESOLUTION.**

Calibration of the input channel can be performed both in the **POSITIVE FIELD** and in the **NEGATIVE FIELD** to correct the measurement in both directions of the sensor (traction and compression example) by:

- Calibration of the **Full Scale**: to program the full scale of the connected sensor.
- **Gain** Calibration: Real-time correction of the read error by a known measurement.

Typical applications:

Automatic weighing systems and small dosages.

Level control systems for tanks, silos and hoppers.

Integrated measuring systems on test and test benches.

Measuring systems integrated in automatic processes.

Industrial process control systems.

Automatic Testing and Quality Control Systems in Production Lines.

Testing of measurements on board material testing machines.

Measurement of springs, friction detection, tear forces, leak tests.

Tests on protection and safety devices.
